

# Sun Damaged Skin

## THE CULPRIT...

Sun damage can be attributed directly to ultraviolet exposure, that produces UVA rays that penetrate deep into the skin, causing sun damage, fine lines, textural changes, dryness, discoloration and dry, scaly spots.

## THE SOLUTION...

To repair sun damage, lightening products are available to target the pigment and age spots that years of sun exposure produce.

## TREATMENTS...

Recommended is a Lumi Facial or a Blue Peel to speed up cell turnover and lighten pigment. *Note: these services can only be performed in a doctor's office and by a licensed professional.* Plus a daily regime of cleansers, toners, moisturizer, & sun block.

## SKIN CARE...

We use S A N Í T A S skincare products.

- **Cleansers-** Moisturizing Cleanser & Lemon Cream Scrub
- **Toner-** Hydrating Toner
- **Moisturizer-** Vita-Rich Serum, Natural Moisture Factor & Topical C
